

Deposit Check via ATM at Bank Leumi

As a professional technical writer, I must preface these instructions with an apology for the quality of the images! I didn't have "screen shots" to work with, only what I was able to capture while dealing with a bank employee who wasn't too sure I should be photographing the screens – so I had to work fast and without time to deal with lighting issues (like the fluorescents and my shadow on many of the shots). Hopefully they're good enough for you to be able to follow the procedure.

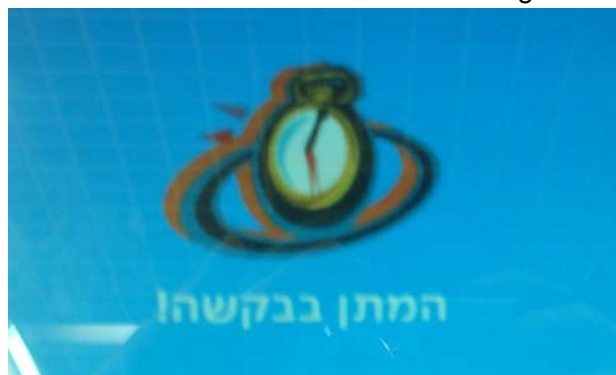

1. Locate the correct ATM – they have two types, this is the one you need (the other has more of a DOS look).

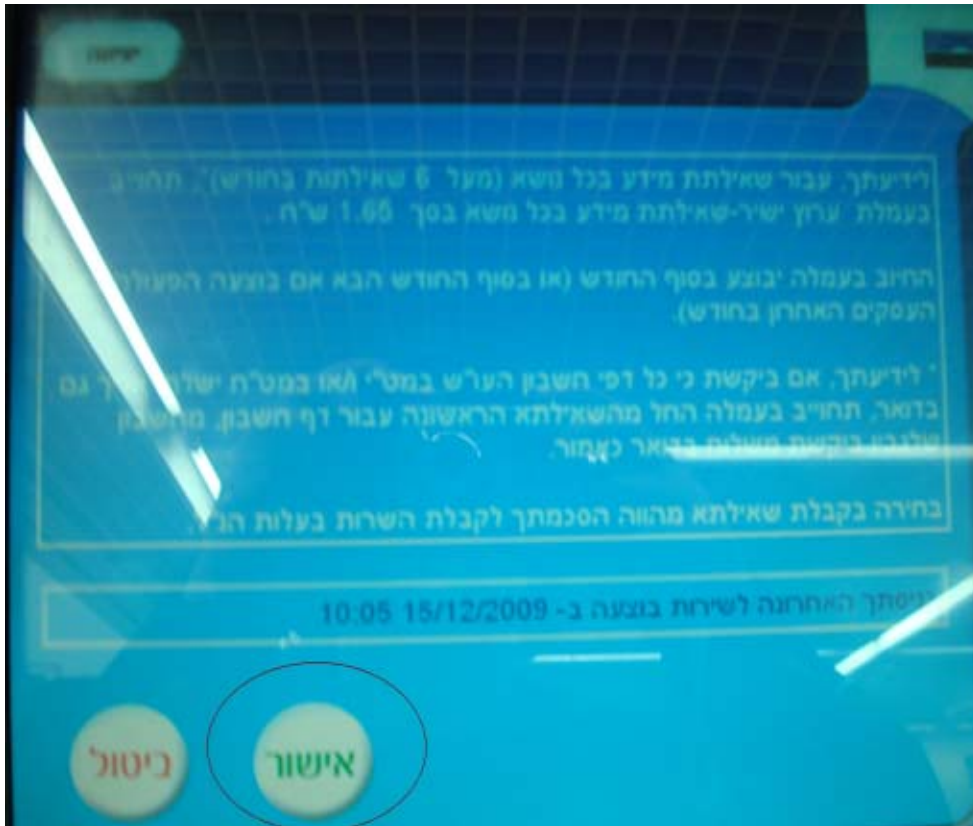

2. Insert Leumi card and enter PIN followed by the **Green** key in the lower right corner. Remove your card.

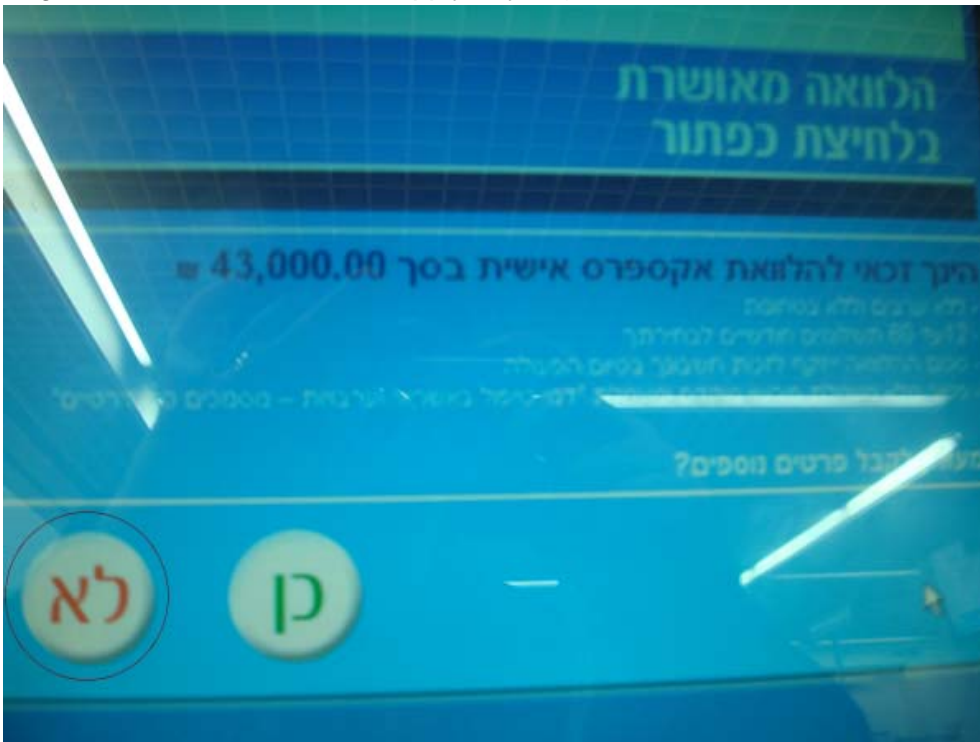

Note: you will see this screen several times throughout the process

3. This screen displays asking you to acknowledge the fact that they are charging you 1.65 shekels to use the ATM, press the **Green (OK) אישור** button.

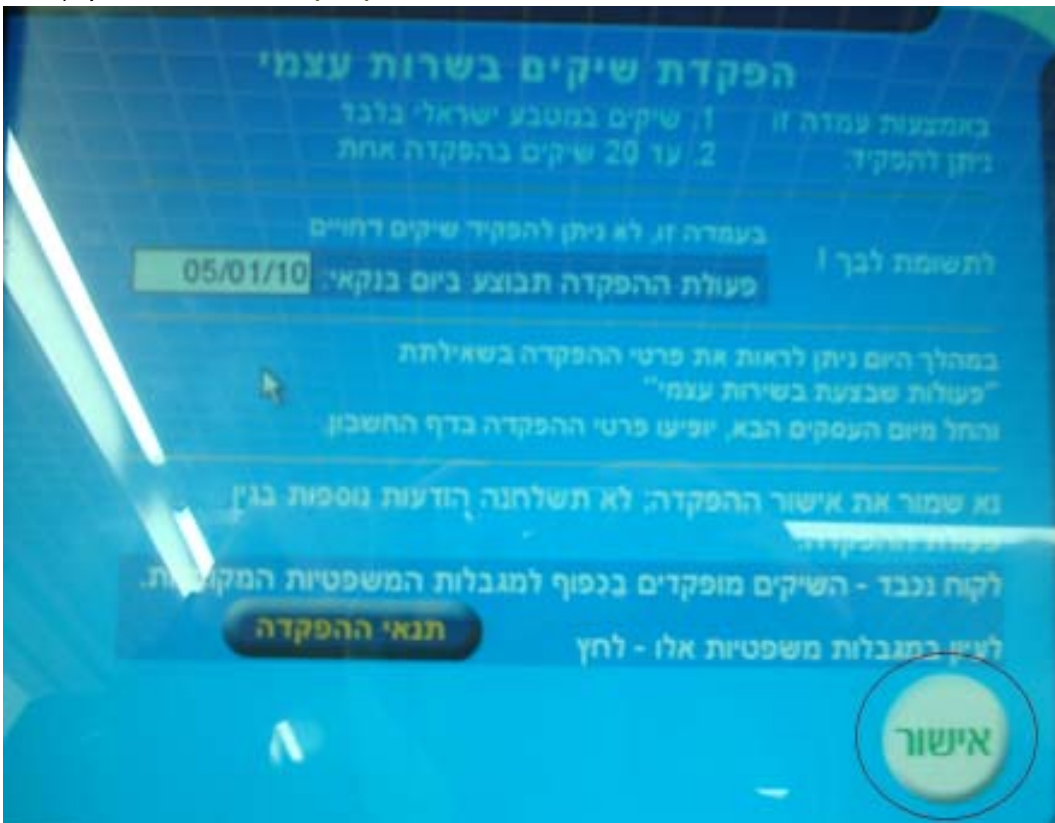

4. This screen displays, press the **Red לא** (No!) button (the woman assisting me didn't explain, she just laughed and said "this doesn't apply to you").

7. This screen displays, press the **Green (OK) אישור** button.

8. This screen displays the deposit date (and probably information on how many days before the check will clear), press the **Green (OK) אישור** button.

9. This screen displays asking whether you want to deposit to the account linked to the card you just inserted or a different account.

- Press the **הפקדה לחשבון הקשור לכרטיס** button in the **lower right** if you want to deposit to the account that is linked to the card you inserted.

- Press the other button in the lower left if you want to deposit to a different account.

I imagine that once this is pressed you will have to enter information about the "other" account – good luck with that!

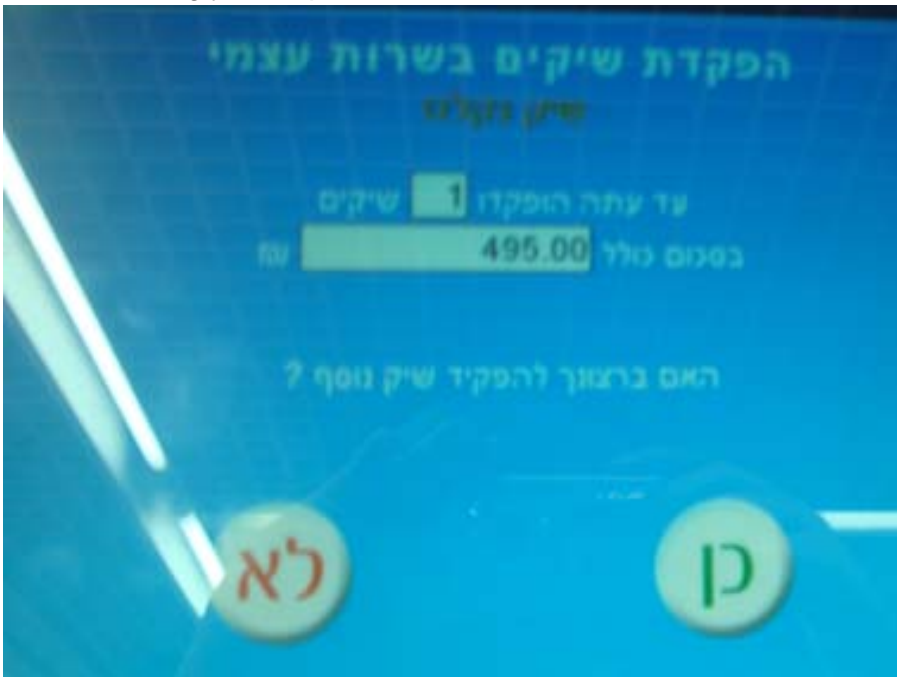

10. This screen displays instructing you to insert the check face up in the orientation demonstrated in the picture into the slot to the right of the screen.

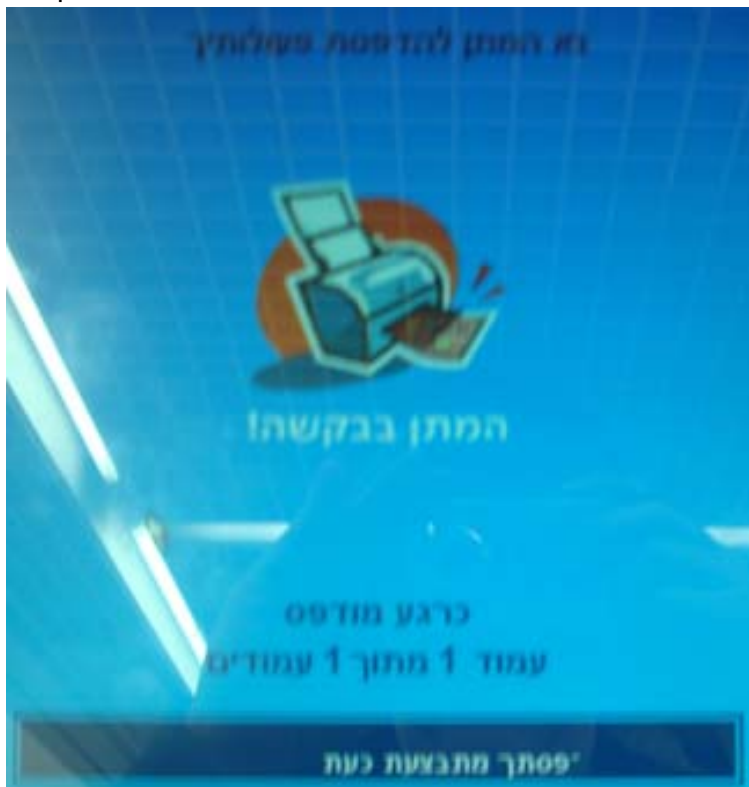

11. When the machine has finished scanning (and digesting) your check, this screen displays with an image of the check you are depositing. Using the on-screen keypad, enter the amount of the check and press the **Green** button (lower right corner).

12. This screen displays the amount of the deposit just completed and asks if you'd like to make another deposit. Press the **Green (Yes) כן** button if you'd like to make another or the **Red (No) לא** button if you are finished making your deposit.

13. When you have finished making deposits, this screen displays indicating that the machine is printing your receipt.

Be patient as it can take several minutes before the receipt – which includes a scanned image of all checks deposited during this session – comes out of the bottom slot.

14. This screen displays asking if you'd like to complete a different type of transaction (e.g., withdraw, view balance, etc.), press the **Red (No) לא** button twice (another screen pops up after the first – like are you *really*, *really* sure you want to exit?) to exit the system.
